

Owl Pellet Bone Chart Animals

Shrew

Shrews run around during the day or night, on the soil surface or hiding under plants and fallen leaves, looking for seeds, berries, or crawling insects to eat!

Mole

Moles spend most of their time digging underground burrows to catch worms and soil insects, but come out at night to search for nesting materials!

Bird (Starling)

Starlings spend their days looking for seeds, berries, and/or crawling insects to eat, and at nighttime they gather in very large flocks to roost in the trees!

Rodent (Vole ↑ Rat ↓)

Voles come out during the day or night, but rats come out only at night! They both run around under plants looking for seeds and berries to eat, but rats will also run around the outside or inside of buildings to eat from garbage cans!
